

## **Assignment 8**

For this assignment I have come up with 3 different types of theme. It was difficult since I had not enough working experience with interactive scenery working web pages. I have started all of them from scratches. Firstly I wanted to put all of my JS, CSS, PHP in one HTML file which had lead me to lots of issues. But I find it really helpful to enhance my knowledge about web designing and also using it in my other future projects. In 2<sup>nd</sup> theme I even included my drawing in background. For 3<sup>rd</sup> theme I wanted to put a game in it. But due to Eid and lots of errors I was not able to finish it that's why I had to come up with something else and I did not want to use my previous assignments files here. I had problem with transitioning with one image to another like a slideshow, I had a problem repeating one image infinite times but in the end I was able to fix that issue in my 3<sup>rd</sup> theme.
